Declaration

The Department of Environmental and Resource Engineering (DTU Sustain) at the Technical University of Denmark carries out a permanent monitoring programme on radioactivity in Danish agricultural products.

Results of the monitoring programme show that levels of radioactive contamination in Danish agricultural products today are less than 10 Bq/kg or Bq/L. This is well below internationally agreed Guideline Levels for radionuclides in internationally traded food following a nuclear or radiological emergency. The Guideline Levels are published by the Joint FAO/WHO Codex Alimentarius Commission.
